EDUCATION

Bachelor of Science in Computer Science: Cybersecurity Concentration

(expected) May 2027

North Carolina State University, Raleigh, NC

GPA 3.7 · Dean's List: Fall 2024, Spring 2026

Relevant Coursework:

Computer Security · Network Security · Privacy in the Digital Age · Operating Systems · Data Structures and Algorithms · Software Engineering · Introduction to Artificial Intelligence · C and Software Tools

WORK EXPERIENCE

IT Support Intern

NC State University, College of Sciences

Sept 2024 - Present

- Provide technical support to faculty, staff, and students, resolving hardware, software, and network issues across campus.
- Install, configure, and troubleshoot computers, printers, and peripherals, ensuring minimal downtime performance.
- Assist with account management, system updates, and security best practices, supporting 500+ users in the College of Sciences.
- Deliver clear, customer-focused service by explaining technical solutions in user-friendly terms, improving overall client satisfaction.

AI Training – Advanced Coder

Outlier.ai

Nov 2024 - July 2025

- Collaborate with machine learning teams to improve generative AI models through expert code review and data evaluation.
- Deliver consistent, high-quality technical feedback with clear documentation and adherence to coding best practices.
- Contribute to improving AI reasoning and code generation quality by applying domain knowledge and programming expertise.

Cybersecurity Practicum - CITE Project

NC State University | Sponsor: Friday Institute

Aug 2026 - Present

- Collaborate with the Friday Institute on cyber threat intelligence for the North Carolina K-12 Cybersecurity Program.
- Design an architecture to centralize threat intelligence from feeds, emails, and blogs, supporting data ingestion, enrichment, and sharing.
- Define STIX/TAXII based sharing workflows and access integration requirements to reduce reliance on manual threat intelligence distribution.

PERSONAL PROJECTS

AI - native CAD assistant [LinkedIn post](#)

Sept 2026 - Present

- Turn one screenshot of a SolidWorks mounting bracket into a live parametric part you can resize and reuse. A reviewer can correct dimensions in seconds instead of remodeling the whole assembly.
- Built a CAD copilot that understands geometry, preserves design intent, and stages every edit behind a preview with accept or reject. The same flow runs on Claude, Cursor, Codex, or a local model so teams get the speed of an agent with an audit trail and no required API spend.

Hooly AI - Android AI keyboard [Play Store](#)

Summers 2026

- Designed and published a full Android keyboard that 850 people now use in real conversations. It pulls context from the chat and writes a reply in Rizz, Casual, or Formal so it sounds like the user.
- Built the privacy model on purpose: grammar fix, clipboard, and AI drafts run in the typing flow. Chat text, screenshots, and model output stay off the server.

Cisco AI Defense CTF - competitor, "Divine Fox"

June 2026

- Competed for 48 hours in Cisco and World Wide Technology's AI Defense CTF. The board was 16 real attack types against live GenAI systems, not a toy quiz.
- Walked prompt injection, jailbreaks, multi-turn context tricks, and poisoned RAG documents through unprotected models.

TECHNICAL SKILLS

Languages: Kotlin, Dart, Java, Python, TypeScript, C, HTML

Frameworks & Tools: Flutter, React, Android Studio, Firebase, EmailJS, Git, VS Code, Linux, FreeCAD, ServiceNow

Security: Computer security, network security, privacy, AI / LLM security, threat modeling, prompt injection

Areas of Interest: Mobile app development, cybersecurity, scalable systems, CTF competitions, AI agents, parametric CAD
